

Docket No. AUS920030166US1

ABSTRACT OF THE DISCLOSURE

INTEGRATED DEVELOPMENT ENVIRONMENT WITH CONTEXT SENSITIVE DATABASE CONNECTIVITY ASSISTANCE

5

A context sensitive database connectivity assistance tool is provided in an integrated development environment. The user provides database information for each connection to be used in a project. The database
10 information may include schema name, database name, username, password, port number, etc. When a user is coding a database related statement, such as a structured query language statement, the user may highlight the statement and access the database connectivity assistance
15 tool. The assistance tool prompts a user to disambiguate table and column names. Metadata may also be provided to the user for the type of column. The user may also set values and conditions for columns in database related statements.
